No BS. Just good old fashioned customer service.

HC-74 for DX/Contest

Pro 7 Headset Cartridge

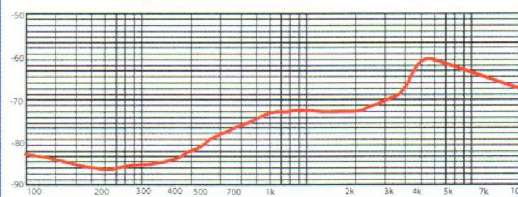

Remove the two flat head screws then remove the element and housing. Insert the new element, replace and tighten the screws.

HC-74 Dynamic Contest Element

The HC-74 is a redesign of the popular HC-4 element and has been developed for serious contest/DX operators. It rolls off the low end at 600 Hz with a 10 dB rise at 2500-3000 Hz, which creates a very articulate signal to break through pileups.
